

GloBox A/B Test Experiment

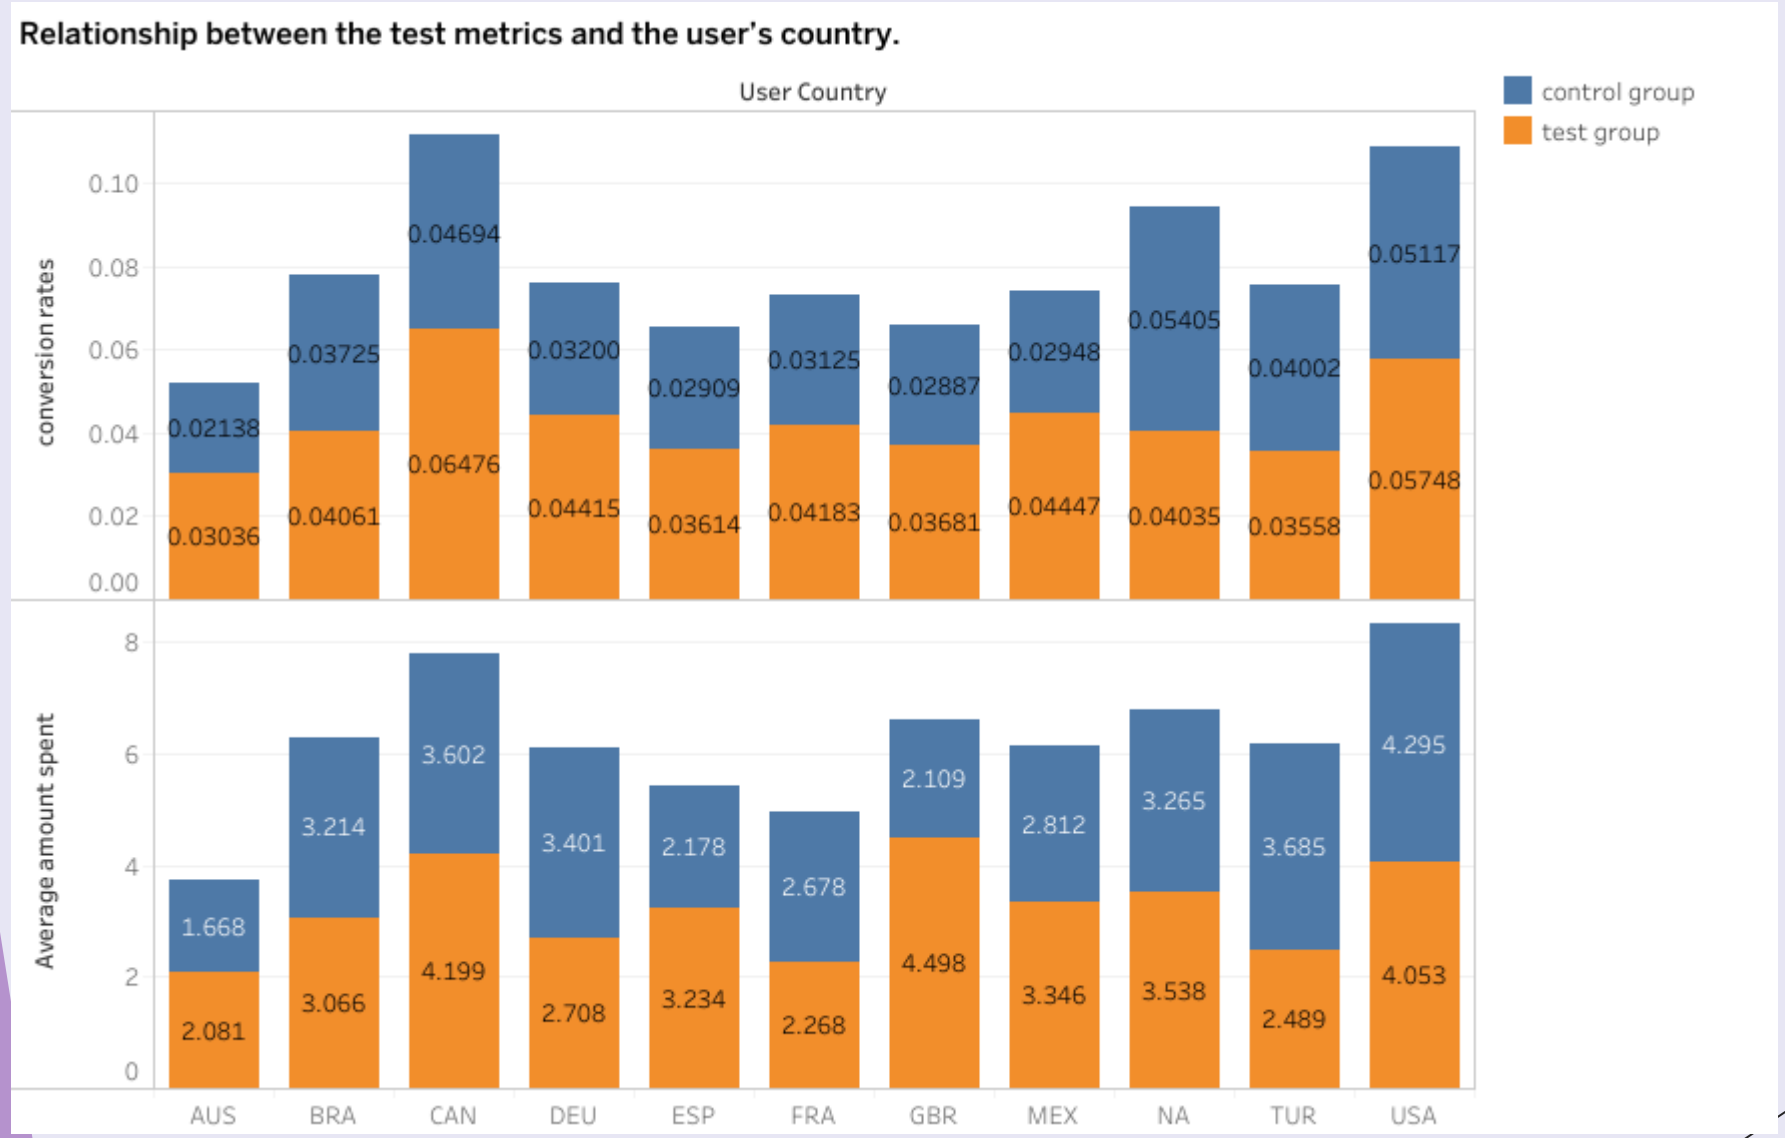

Context of the A/B Test

- **Objective**: If the Proposed UI/UX update could boost conversion rates.
- **Parameters:**
  * Test Group.
  * Control Group.
  * Main Metrics.
- **Success Criteria:** Increase in metrics.
- **Timeframe :** 25th Jan - 6th Feb 2023.
- **Sample size:** 48,943.
- **Observations:**
  * Increased conversion rate.
  * Similar amount spent.

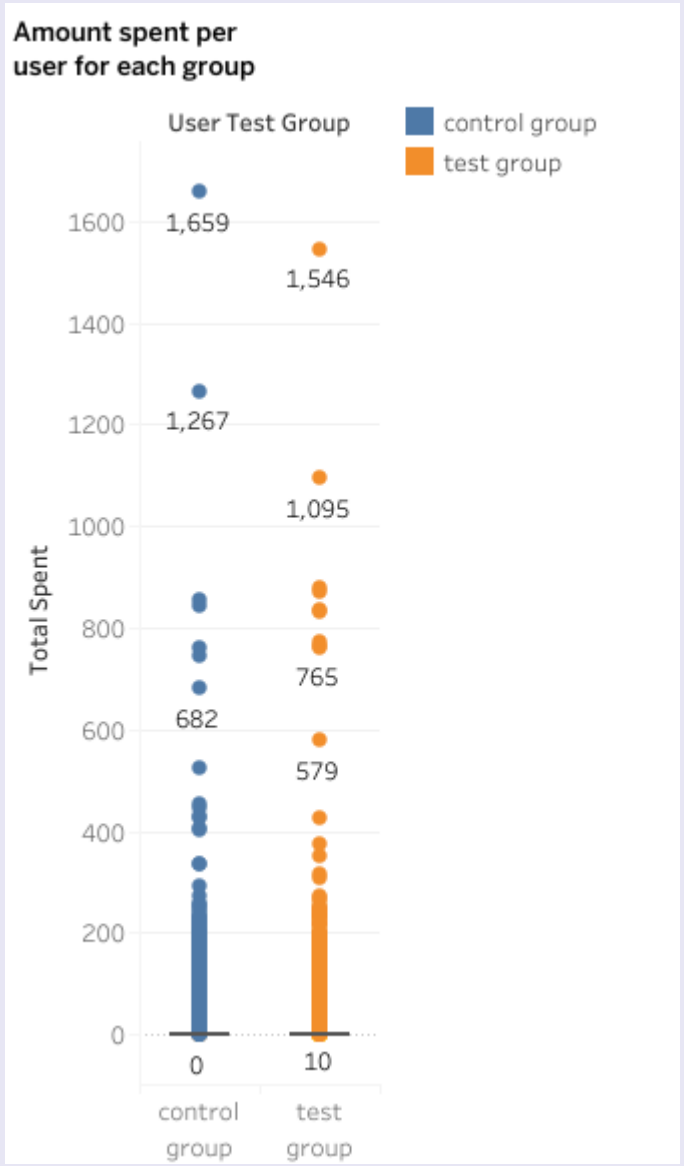

Key Results:

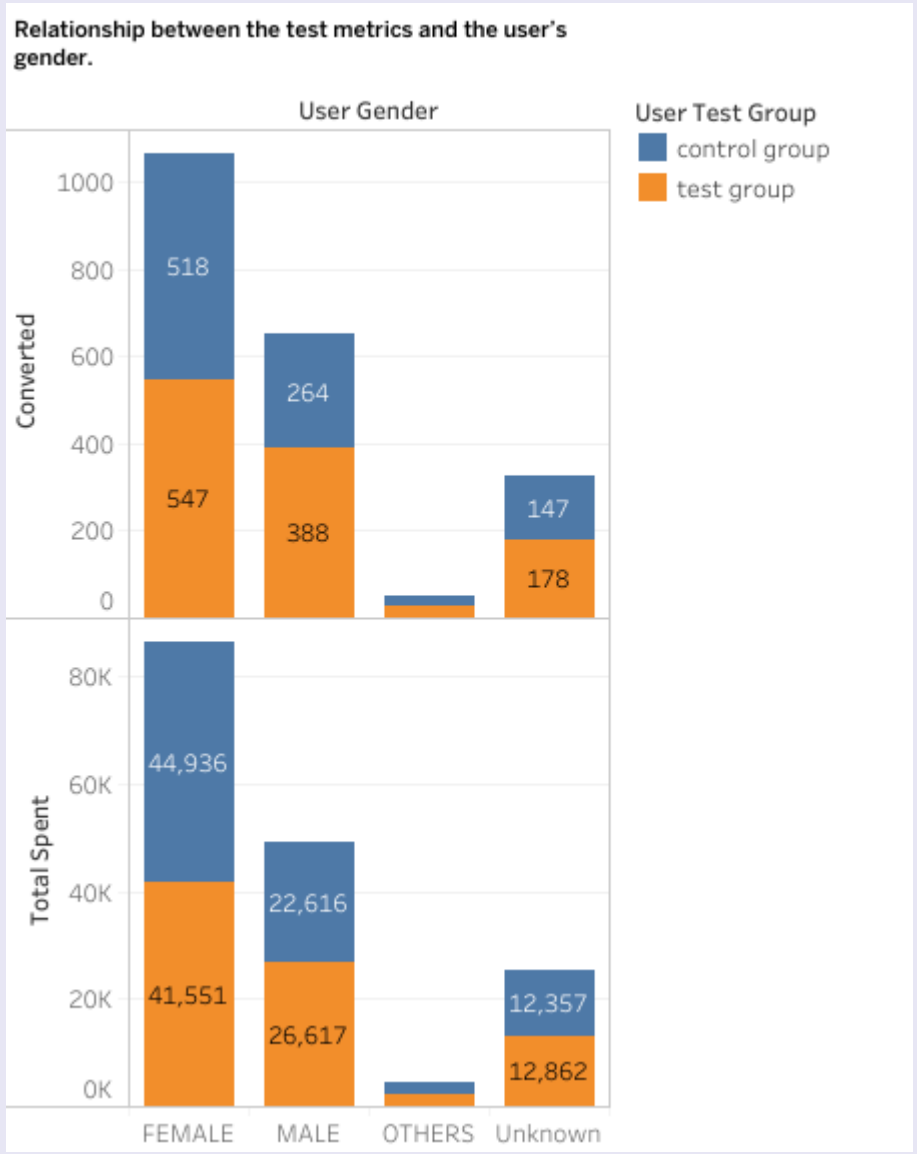

- Significant difference in conversion rate.
- Higher conversion rate in the test group.
- No significant difference in the Average Amount spent.

- USA, Canada, and Namibia have the highest conversion rate and the average amount spent.
- Australia, Spain, and GBR have the lowest conversion rate.
- Australia, France, and Spain have the lowest average amount spent.

- Two users each spent above $1,000 for both groups.
- Five users each spent between $500 and $1,000 for both groups.
- 2,087 users spent less than $500 for both groups.

- Women contributed 52.24% of the total amount spent.
- Women contributed 50.86% of the total users converted.
- Women are the major customers of GloBox.

Recommendation:

- **Proceed with the Launch:** Statistically significant conversion improvement with the new design.
- **Monitor Revenue Impact post-launch.**
- **Consider Operational Costs for implementation and maintenance.**
- **User Experience unaffected.**
- **Continuous Evaluation:** Increase sample size for robust results.

Key massage:

"Given the positive impact of the new design on conversion rates without affecting user spending or experience, we recommend proceeding with the launch, continuous monitoring of metrics, and further testing to ensure sustained benefit"

Thank You
